

## Unique Social Media Challenges for 2025

- AI GENERATED** Current level of AI generated SMC is around 39% and expected to grow to around 50% by the end of the year, and over 90% by the following year.
- PROS:** faster, easier, cheaper and in some cases better than what you might be able to produce.
- CONS:** disengagement, decline in audience interest or trust, blends in too much with other AI generated content making it invisible.
- My take?** Social media without humans is no longer social media. If you aren't involved, your customers will not be involved.
- BAD ACTORS** AI-powered hacking and phishing continue to become more sophisticated, and have infiltrated everything from messaging apps to all social media.
- My take?** Consider limiting and clearly stating and *pinning* on all platforms exactly how you communicate with customers: **only email, only text to (xxx) xxx-xxxx number, only through your website, etc.** In other words, if you don't use Facebook Messenger? Say so.

## Time to go Old School

### FUN FACTOR

Ten years ago social media was a free and effective way to reach out to customers. People were more likely to see your posts. It was civil and often fun.

Today? It's a rage-filled firehouse of misinformation advertising and bullying.

**My take?** Consider maintaining a minimal presence for 2025 if you can't bring yourself to shut it down. In the meantime, support your local businesses by **returning to traditional media**: local news, sponsor a little league team, sponsor local town events, and give your website a facelift if it needs it.
